

March 2009

FROM THE PRESIDENT

Greetings:

Good news...our Takoma Park Showroom is just about finished. We have added more space and displays. We are proud to announce our next event to be held May 6 in our newly finished Showroom...a GE Brand Night.

Attending is Chef Eric of Café de Paris located in Columbia, Maryland. Chef Eric will wow you with his creations and educate you about which wine to serve with a verity of foods.

Please RSVP to 301-608-2600 by May 4th.

Learn about GE's newest products, enjoy heavy hors d'oeuvres all night long, and be eligible to win one of six prizes (\$300 gift card) and more.

We will have a similar event in the Chantilly Showroom, date to be determined.

Thanks for your support,
Tom

TIP OF THE DAY

When connecting an icemaker to the water line, leave extra tubing coiled behind the fridge to allow the appliance to be pulled forward for service and maintenance. Copper tubing is recommended for this installation because it is most durable. Plastic tubing in this application can become brittle over time, when exposed to the heat of the compressor and condenser, and fracture causing water damage to the floor.

Do not install the refrigerator water supply valve on the underside of the water pipe. Over a period of time, scale and lime residue will tend to settle in the valve and clog it.

Concerns about Appliances - getting the correct appliances in your kitchen

Some questions you should consider before purchasing your new appliances.

Dimensions: Getting the correct dimensions for all appliances is critical. If you are replacing existing appliances, measure the openings within your cabinets. This applies to all built-in appliances refrigerators, ovens, ranges, hoods, etc. If new or remodeling bring in your plans with the measurements.

Refrigerators: Hinged left or right, which side is the hinge located? What are you looking for, free standing, counter depth, or built-in.

Ranges/Hoods: Gas or electric? If gas natural or liquid propane? Hoods vented or non-vented hoods?

Delivery: Most products going into your kitchen need to be ordered. Plan the delivery intervals to be efficient and timely for your work schedule. Make sure you have given everyone a contact name, phone number and most of all the correct delivery address.

Our goal is to help you make the correct choice for your appliances and deliver them in a timely a manor. We hope your experience with ADU is pleasant and the most rewarding part of the project.

TIP OF THE DAY continued...

Use the icemaker during the winter months even if just to discard ice. Long periods of non-use can jam up the unit.

Other water lines:

The water taps for the washing machine should

be shut off when the washing machine is not in use. Most rubber fill hoses are not meant to withstand constant water pressure and can burst. If an awkward position and difficult to reach, purchase high

Lost your Appliance manual...log-on to the appliance411.com and print off your manuals

pressure, braided metal fill lines.

Myth - A dishwasher pumps in water to fill it up.

Truth - When needed, a water fill valve simply opens to allow the household water pressure to fill the machine. The pump is only involved in draining the appliance and washing.

Service on your Appliances:

Looking for **service** on your appliance?

In warranty or out of warranty?

On ADU's website, www.adu.com, in the navigation bar, **tab - Service Companies** you will find, per store location, the appropriate service company for all the products you purchase from ADU.

Just a click away on ADU's Website.

All four store locations have their own list of service companies for you to print out and retain for your records for years to come.

Four stores = four list of Service Companies..

Example of the Takoma Park Service Companies...

VIDEO OF EACH STORE LOCATION

Want a quick tour of the Washington Sales Division Showroom?

On ADU's Website, in the navigation bar, click on **locations/videos**, and you will be able to view a video of each of our four store showrooms.
